

Section 7: Live GenAI Simulation Task

Instructions: You are required to complete this task using ChatGPT (or a similar GenAI tool).

Problem: You've been asked to create a small training module outline using GenAI for a non-technical team on the topic "How to make better decisions using data." GenAI should help you:

- Define 3 learning objectives
- Generate a sample activity or scenario for each objective
- Summarize the module in one paragraph for the training catalog

1st prompt

I need to create a small training module outline for a non-technical team on 'How to make better decisions using data.' Please provide: 3 learning objectives (clear and actionable). A sample activity or scenario for each objective (engaging and easy to understand). A one-paragraph summary for the training catalog (concise and informative).

ChatGPT said:

Training Module Outline: How to Make Better Decisions Using Data

Learning Objectives:

- 1. Understand the Importance of Data in Decision-Making**
 - *Activity:* Present two decision-making scenarios—one based on gut feeling and another using simple data insights. Discuss the outcomes and benefits of data-driven choices.
- 2. Learn How to Identify and Interpret Relevant Data**
 - *Activity:* Provide a small dataset (e.g., sales figures, customer feedback) and guide participants in spotting key trends and insights using simple visuals like bar charts or tables.
- 3. Apply Data-Driven Thinking to Everyday Business Decisions**

- *Activity:* Present a real-world case (e.g., deciding which marketing campaign to invest in) with relevant data points. Have participants analyze the data and propose a recommendation.

Training Catalog Summary:

In today's fast-paced business environment, making informed decisions is crucial. This training will equip non-technical teams with practical skills to leverage data for better decision-making. Through interactive activities and real-world scenarios, participants will learn how to identify relevant data, interpret key insights, and confidently apply data-driven thinking in their daily roles. Whether it's improving customer service, optimizing resources, or selecting the best business strategies, this session will help participants make smarter, more effective choices.

2nd prompt

The learning objectives should be highly specific, and the activities should be engaging (role-playing, case study, or hands-on tasks). Please refine the previous response to: Ensure each learning objective is SMART (Specific, Measurable, Achievable, Relevant, Time-bound). and generate real based scenario for each objective

ChatGPT said:

Training Module Outline: How to Make Better Decisions Using Data

Learning Objectives (SMART-Based):

1. Identify the Role of Data in Everyday Business Decisions

- *Specific:* Understand how data supports decision-making in common business scenarios.
- *Measurable:* Participants can list three benefits of data-driven decisions by the end of the session.
- *Achievable:* Uses relatable workplace examples, making it easy for non-technical teams to grasp.
- *Relevant:* Helps teams rely on facts instead of assumptions.
- *Time-bound:* Achieved within the first 20 minutes of training.

Real-World Scenario:

Role-Playing: Participants act as managers of a retail store facing declining sales. They are given two choices—make changes based on instinct or analyze customer purchase data first. After discussing their decisions, they see how data (e.g., popular items, peak hours) leads to better solutions.

2. Extract and Interpret Key Insights from Simple Data Sets

- *Specific:* Learn how to recognize patterns and trends in basic reports.
- *Measurable:* Participants can highlight three key insights from a dataset by the end of the exercise.
- *Achievable:* Uses simple data visualizations such as sales figures, customer feedback, or performance reports.
- *Relevant:* Helps teams analyze everyday business reports more effectively.
- *Time-bound:* Completed within 30 minutes using guided practice.

Real-World Scenario:

Hands-On Activity: Participants receive a monthly performance report for an online store, showing product sales and customer ratings. Their task is to identify the best and worst-performing products and suggest an action plan (e.g., restocking top sellers, improving low-rated items).

3. Use Data to Justify and Communicate Business Decisions

- *Specific:* Practice making recommendations using data to back up decisions.
- *Measurable:* Participants successfully present a data-supported decision in a short group discussion.
- *Achievable:* Encourages teamwork and communication without requiring advanced analytics.
- *Relevant:* Strengthens the ability to advocate for smart business choices.
- *Time-bound:* A 25-minute activity followed by a short discussion.

Real-World Scenario:

Case Study: The team acts as a marketing department deciding where to invest their budget—Facebook ads, influencer marketing, or email campaigns. They analyze past campaign data (engagement rates, cost per lead, conversion rates) and present their decision to a mock “executive team,” justifying their choice with data.

Training Catalog Summary:

Making informed decisions is essential for business success. This interactive training teaches non-technical teams how to use data for smarter choices. Through role-playing, hands-on exercises, and real-world case studies, participants will learn to identify relevant data, extract key insights, and confidently apply data-driven reasoning. By the end of the session, they will be equipped to support their decisions with facts rather than assumptions, leading to improved outcomes in their daily roles.

3rd prompt

in training catalog summary Emphasize the real-world impact of the training and include a strong closing statement about how this module will improve decision-making and team collaboration

ChatGPT said:

In today's dynamic business landscape, the ability to make informed, data-driven decisions is crucial for success. This interactive training empowers non-technical teams to harness data effectively, leading to tangible improvements in decision-making and team collaboration. Through role-playing, hands-on exercises, and real-world case studies, participants will learn to identify relevant data, extract key insights, and confidently apply data-driven reasoning in their daily roles. By the end of the session, they will be equipped to support their decisions with facts rather than assumptions, resulting in enhanced accuracy, reduced risks, and the discovery of new opportunities. Furthermore, fostering a shared understanding of data cultivates a culture of transparency and collective problem-solving, strengthening team cohesion and communication. Embracing this module will position your team to navigate challenges effectively and drive sustained business success through collaborative, data-informed strategies.

4th prompt

all the real worlds scenarios seems very short and make it difficult for non technical person to understand so keep all thing same as above just give real-world scenario more explanation so it could be understood by not technical person

ChatGPT said:

Training Module Outline: How to Make Better Decisions Using Data

Learning Objectives (SMART-Based):

1. Identify the Role of Data in Everyday Business Decisions

- *Specific:* Understand how data supports decision-making in common business scenarios.
- *Measurable:* Participants can list three benefits of data-driven decisions by the end of the session.
- *Achievable:* Uses relatable workplace examples, making it easy for non-technical teams to grasp.
- *Relevant:* Helps teams rely on facts instead of assumptions.
- *Time-bound:* Achieved within the first 20 minutes of training.

Real-World Scenario:

Role-Playing Exercise: Imagine you are part of a team managing a retail clothing store experiencing a noticeable decline in sales over the past quarter. The team is convened to address this issue. Two approaches are presented:

- **Approach A:** Rely on intuition and anecdotal observations. For instance, some team members believe that the store's layout might be unappealing or that the product selection isn't trendy enough.
- **Approach B:** Utilize available data to inform the decision. This involves analyzing sales data to identify which products have seen the most significant drop, examining customer feedback for recurring complaints or suggestions, and reviewing foot traffic patterns within the store.

Participants will split into groups, with one group adopting Approach A and the other Approach B. After deliberation, each group will present their proposed solutions. The facilitator will then guide a discussion comparing the outcomes of both approaches, highlighting how data-driven decisions can lead to more targeted and effective strategies, such as rearranging the store layout based on foot traffic data or adjusting inventory based on sales trends.

2. Extract and Interpret Key Insights from Simple Data Sets

- *Specific:* Learn how to recognize patterns and trends in basic reports.
- *Measurable:* Participants can highlight three key insights from a dataset by the end of the exercise.

- *Achievable:* Uses simple data visualizations such as sales figures, customer feedback, or performance reports.
- *Relevant:* Helps teams analyze everyday business reports more effectively.
- *Time-bound:* Completed within 30 minutes using guided practice.

Real-World Scenario:

Hands-On Activity: Participants are provided with a simplified dataset from a fictional online bookstore. The dataset includes monthly sales figures for various genres (e.g., fiction, non-fiction, children's books), customer ratings for each genre, and the number of returns per genre over the past six months.

The task involves:

- **Identifying Trends:** Recognizing which genres have increasing or decreasing sales.
- **Correlating Data Points:** Observing if lower customer ratings correspond with higher return rates.
- **Drawing Conclusions:** Determining actionable insights, such as the need to source higher-quality books in genres with high return rates and low ratings or to increase marketing efforts for genres with rising popularity.

Participants will work in small groups to analyze the dataset and present their findings, fostering collaborative analysis and interpretation of data.

3. Use Data to Justify and Communicate Business Decisions

- *Specific:* Practice making recommendations using data to back up decisions.
- *Measurable:* Participants successfully present a data-supported decision in a short group discussion.
- *Achievable:* Encourages teamwork and communication without requiring advanced analytics.
- *Relevant:* Strengthens the ability to advocate for smart business choices.
- *Time-bound:* A 25-minute activity followed by a short discussion.

Real-World Scenario:

Case Study: The participants assume the role of a marketing team at a mid-sized company that has allocated a budget for promotional activities. The options include investing in social media

advertising, organizing in-store events, or launching an email marketing campaign. Historical data is provided, detailing the performance metrics of each channel, such as engagement rates, conversion rates, and return on investment (ROI) from previous campaigns.

Each group will:

- **Analyze the Data:** Review the past performance of each marketing channel.
- **Make a Recommendation:** Choose the channel that offers the best potential ROI based on the data.
- **Present Their Decision:** Articulate their choice and support it with data during a brief presentation to the rest of the participants.

This exercise emphasizes the importance of backing business decisions with empirical evidence and enhances participants' ability to communicate data-driven recommendations effectively.

Training Catalog Summary:

In today's dynamic business environment, the ability to make informed, data-driven decisions is crucial for success. This interactive training empowers non-technical teams to harness data effectively, leading to tangible improvements in decision-making and team collaboration. Through role-playing, hands-on exercises, and real-world case studies, participants will learn to identify relevant data, extract key insights, and confidently apply data-driven reasoning in their daily roles. By the end of the session, they will be equipped to support their decisions with facts rather than assumptions, resulting in enhanced accuracy, reduced risks, and the discovery of new opportunities. Furthermore, fostering a shared understanding of data cultivates a culture of transparency and collective problem-solving, strengthening team cohesion and communication. Embracing this module will position your team to navigate challenges effectively and drive sustained business success through collaborative, data-informed strategies.

1.What was useful from the GenAI response(s)?

The previous conversation provided a comprehensive framework for training non-technical teams on data-driven decision-making. Key elements included:🔗

- **SMART Learning Objectives:** Clearly defined goals that are Specific, Measurable, Achievable, Relevant, and Time-bound, ensuring focused and attainable outcomes.🔗

- **Engaging Real-World Scenarios:** Detailed examples, such as managing a retail store's declining sales or analyzing an online bookstore's performance, which illustrate practical applications of data analysis in everyday business situations.❏
- **Interactive Training Methods:** Utilization of role-playing, hands-on activities, and case studies to enhance understanding and retention of data-driven concepts.❏
- **Emphasis on Real-World Impact:** Highlighting how data literacy can lead to improved decision-making, increased efficiency, and stronger team collaboration within an organization.❏

By incorporating these elements, the training module aims to equip non-technical teams with the skills necessary to leverage data effectively, fostering a culture of informed decision-making and collaborative problem-solving.❏

2.What was misleading, fluffy, or needed improvement?

Misleading or Unclear Areas:

- **"Harness data effectively" in the training catalog summary** – This phrase is broad and might be unclear to a non-technical audience. It could be more concrete, e.g., "use simple data insights to improve business outcomes."
- **"Enhanced accuracy, reduced risks, and the discovery of new opportunities"** – While accurate, this feels a bit generic. You could specify examples (e.g., "reducing unnecessary spending, improving customer retention, and spotting market trends early").
- **Role-playing scenario for Objective 1 (Retail store example)** – The way it's structured may cause some participants to feel like Approach A (gut feeling) is obviously wrong before even engaging in the exercise. You could frame it in a way that encourages open-ended exploration before showing the strengths of data-driven decisions.

3.How did you iterate or change your prompt to get better results?

I improved the prompt in several ways to get better results:

1. **Made Learning Objectives More Specific (SMART)**

- I revised them to be measurable and time-bound, making them clearer and more actionable.

2. Requested More Engaging Activities

- I asked for role-playing, hands-on tasks, and case studies instead of just discussions, making the training more interactive.

3. Asked for Real-World Scenarios with More Explanation

- Initially, scenarios were too brief. I requested detailed, easy-to-understand examples for non-technical participants, making the content more accessible.

4. Refined the Training Catalog Summary

- I emphasized the real-world impact and team collaboration, leading to a stronger closing statement.

My iterations made the content clearer, more engaging, and better suited for a non-technical audience.
